WHY CHOOSE A DEDICATED SERVER?

If you aim to build a successful online business, you should choose neither a shared hosting account (because you will soon outgrow the available resources) nor a Virtual Private Server (because it would just be a stopgap solution). What you really need is a dedicated server – the only hosting environment that can guarantee you absolute hardware and software freedom, full root access, rock-solid, bullet-proof network connectivity and unmetered CPU resources at the same time.

A dedicated server will allow you to install any OS that you want and to add more RAM or more disk drives to the server without having to upgrade like you would have with any other hosting solution. Hardware-wise, a dedicated server is the only platform that allows you to set up a RAID array, provided that you have more than one disk drive.

WHY DomainMonkee.com:

- 99.9% Network Uptime
- 24/7 Technical Support
- 1-hour Response Time
- Full Root Access
- Free Bonuses
- A US Data Center
- No Setup Fees

INTEL ATOM SERVERS

The Intel Atom servers run are created to run in a low-powered environment. This means that they are designed to be extremely efficient when running any sort of task. This makes them an ideal home if you want to have a dedicated server that will power only a single website or will be a part of a cluster.

Atom 2c	Intel Atom D525 1.8 GHz (2 cores)	4 GB	2x240 GB SATA SSD	10 TB	\$40.00/mo

INTEL XEON SERVERS

The Intel Xeon architecture is made precisely with servers in mind. If you plan to use your dedicated server for a reseller hosting base, or to create virtual servers, it's the best possible choice. Additionally, thanks to the large number of CPU cores and higher clock speed, video transcoding on these servers is a breeze.
